FoodNest v2.0 — Release Requirements

ShipGuard AI demonstration requirements. The repository should satisfy these requirements before release.

ID	Requirement	Priority
REQ-01	All automated tests must pass.	Critical
REQ-02	The application must validate required payment configuration before payment processing.	Critical
REQ-03	The documented Node.js version must match the deployment environment.	High
REQ-04	API documentation must match the implemented endpoint paths.	High
REQ-05	Production database migration and rollback steps must be documented.	Medium
REQ-06	The release report must identify blockers separately from warnings.	High

Expected demo outcome: ShipGuard should discover the deliberately introduced release issues, propose fixes, apply approved fixes, rerun affected checks, and produce a final READY/BLOCKED release gate.
